PROFESSIONAL SUMMARY

Results-driven Data Engineer and Data Scientist with a Master's in Data Science and hands-on expertise in Python, SQL, and robust pipeline architecture. Specializing in extracting, transforming, and loading (ETL) complex datasets to generate commercially viable insights. Adept at building scalable analytics pipelines, predictive modeling, and working cross-functionally to bridge technical infrastructure and strategic business decisions.

EDUCATION

MSc Data Science and its Applications - University of Essex, UK

Jan 2025 - Feb 2026

Bachelor of Engineering in Computer Science - Adhiyamaan College of Engineering, India

Aug 2018 - Mar 2022

PROFESSIONAL EXPERIENCE

THENU - Colchester, UK

Feb 2026 - Present

Founder & Full-Stack Developer

- Architected and developed a comprehensive smart kitchen and meal-planning platform utilizing Python, React, TypeScript, and MongoDB. Engineered scalable backend systems to support ingredient-based recipe discovery, automated meal planning, and real-time supermarket price comparison.
- Pitched the platform's technical infrastructure and business roadmap to industry leaders, successfully securing 1st Prize at the Colchester Dragons' Den competition.

Siscaso - India

Dec 2021 - Feb 2024

Data Engineer

- Architected and deployed scalable analytics pipelines using Python and SQL to extract, clean, and combine large volumes of disparate transactional data, processing 100 GB weekly.
- Optimized large-scale SQL and MongoDB database structures, improving data retrieval speeds by over 30% for fast-moving, data-intensive analytical applications. Engineered robust validation checks on imperfect data flows, reducing data discrepancies by 60% and ensuring high-fidelity reporting for cross-functional stakeholders.

Yearn NFT - India

Jan 2019 - Mar 2021

Junior Designer (UI/Visuals & Dashboards)

- Translated complex datasets into intuitive, client-facing Business Intelligence (BI) dashboards to support actionable decision-making. Collaborated with marketing and product teams to define measurement outcomes, presenting analytical insights in accessible formats that improved stakeholder reporting efficiency by 28%.

ACADEMIC & ANALYTICAL PROJECTS

Predictive Modelling & Analytics Dashboard

Oct 2025 - Dec 2026

Data Scientist / Engineer

- Built a highly accurate predictive model using XGBoost on a massive 25-year dataset, employing Python, Pandas, SQL, and Matplotlib.
- Designed robust Python preprocessing scripts to systematically handle missing values, outliers, and imperfect evidence, increasing overall model accuracy to 69%.
- Visualized KPIs to derive tactical insights, supporting data-driven investment frameworks.

SKILLS

Technical Skills: SQL, Python (Pandas, NumPy, Scikit-learn), MongoDB, React, TypeScript, JavaScript, Tableau, Power BI, Git/GitHub, Jupyter Notebooks.

Professional Skills: ETL Pipeline Automation, Data Warehousing, System Architecture, Data Cleaning & Preprocessing, Predictive Modelling, Decision Science, Machine Learning (XGBoost), A/B Testing, Statistical Analysis.

AWARDS

Dr. Mario Gutierrez-Roig Prize - University of Essex, 2025: Recognized as the top-performing student in the MSc Data Science cohort.

1st Prize Winner - Dragons' Den Pitch Competition, 2025: Demonstrated exceptional ability to translate complex technical concepts and communicate commercial value clearly to business leaders.
